DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being obvious over Sakai et al. US # 6,496,397.

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the

reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(I)(1) and § 706.02(I)(2).

Sakai et al. teach an inverter 2, for controlling ac induction motor 3 of variable speed. Inverter control is provided based on detected current input to the inverter, pwm gate signal generator 6 to control inverter 2, auto-torque boost 4 and output voltage command Vu, Vv, Vw, the phase reference signal and sample-hold circuits for sampling and holding the output of dc current detector 9. The claimed limitations are having lot of similarities with Sakai et al. teaching, wherein Sakai et al. teaches that for the purpose of current limit control the control device of the inverter device is arranged to reduce the inverter's frequency output when any one of the first and second sample-hold circuits goes beyond the preset level, (see column 3, lines 50-57, column 4, lines 41-62, column 6, lines 20-62).
